

Learning points on Diabetes and Renal

ESRD mainly from DM and HBP

eGFR Creatinine so inaccurate that not worth looking at until under 60

Cystatin C far better but 900x as expensive

Drugs that can be used for DM in severe CKD are DPP4 Or Exenatide and Insulin

Not MF [lactic acidosis] SU [Hypo] PGZ [Fluid retention leading to HF]

CGA Score

Cystatin C

Increased CVS risk

Treat BP Proteinuria

Increased Hypos

Limited number of hypoglycaemic agents
